How it Works

A uniquely-branded website, Compulink's patient Web portal can be integrated with your current website or hosted by Compulink.

From the portal, patients can securely access a variety of services including:

■ **Patient Registration**

Provide new patients with convenient pre-registration and existing patients with an easy way of keeping their information up-to-date. Collect demographics, insurance, referral and other vital information.

■ **Electronic Health Records**

Encourage patients to participate in their care! Make it easy for them to share and update their personal health history including medications, allergies, health status, family history, etc.

■ **Appointment Scheduling**

Save staff time and reduce no-shows by allowing patients to request an appointment online and view currently scheduled appointments.

All information collected via the portal is automatically downloaded to Compulink Advantage where it's compared to your existing patient database. Your staff then has the opportunity to select which information to update.

Why a Patient Portal?

■ **Improves Office Efficiency & Reduces Expense**

- Saves valuable office time spent collecting patient data
- Allows you to check insurance eligibility prior to patient visit
- Saves time & money in mailing, stationary and postage

■ **Leads to Increased Patient Satisfaction**

- Convenient, secure and private option for patients to provide information
- Improves accuracy of patient information

■ **Increases Practice Visibility**

- Differentiates your practice
- Extends your existing website to offer patients better service
